

## “The State of the Field: Prevention Science Training”

Date: Tuesday, May 26, 2009

Time: 1pm - 4:45pm

Location: Hyatt Regency in D.C.

Presenters:

Critical issues in prevention science education and training will be reviewed in a series of presentations from national leaders in the field. The workshop will consist of moderated lecture and discussion, balancing theoretical approaches to training with practical training strategies, and emphasizing lessons learned about prevention science training applicable to a diverse audience. New advances in prevention science training at Prevention Research Centers will be discussed. Prevention courses and curricula utilizing Risk and Resilience, Community-Based Participatory Research (CBPR), and Service Learning (SL) frameworks will be presented. Prevention training resources will be provided to participants to encourage and support the addition of prevention science content to existing courses and curricula. Discussions throughout the workshop are intended to lead to the identification of areas of mutual interest with prevention training stakeholders in diverse academic settings and public health practice, and the identification of strategies for developing the next stage of prevention science training.
