

## POSTDOCTORAL FELLOWSHIPS

The University of Southern California School of Medicine, Department of Preventive Medicine, Division of Health Behavior, seeks candidates for two- to three- year research fellowships funded by the National Cancer Institute. Fellows have an opportunity to work on ongoing research projects as well as to work on projects of their own design. Research includes: etiology of cancer; prevention of tobacco and other substance abuse; translation of basic research from multiple disciplines into new, synergistic applications in tobacco and drug abuse prevention; mass media and community approaches to health promotion; prevention research into childhood obesity; promotion of physical activity and healthy eating behaviors; measurement and assessment of health-related behavior and behavioral issues in epidemiology; and neurogenetics of obesity and/or tobacco and alcohol abuse.

Depending on area of expertise, fellows may be engaged in integrative research bridging two or more disciplines and departments, e.g., epidemiology and geography, or social psychology and physiology. Candidates should have a strong background in cognitive science, social psychology, anthropology, sociology, health behavior research, or in other disciplines with strong potential for innovative applications in prevention

Qualified individuals must have completed a PhD, MD or equivalent, and must be a US citizen or have permanent resident status. Annual salary is based upon year doctorate received. Health insurance, tuition, and conference travel provided. Open until filled.
